# TRANSPORTATION SYSTEMS SECTOR CYBERSECURITY FRAMEWORK IMPLEMENTATION GUIDE

The Transportation Systems Sector Cybersecurity Framework Implementation Guidance and its companion workbook provide an approach for [Transportation Systems Sector](#) owners and operators to apply the tenets of the [National Institute of Standards and Technology Cybersecurity Framework](#) to help reduce cyber risks. Specifically, organizations may use the implementation guidance to:

- Characterize their current cybersecurity posture.
- Identify opportunities for enhancing existing cyber risk management programs.
- Find existing tools, standards, and guides to support Framework implementation.
- Communicate their risk management issues to internal and external stakeholders.

Organizations that lack a formal cybersecurity risk management program could use the guidance to establish risk-based cyber priorities.

## SHIELDS UP

Russia's invasion of Ukraine could impact organizations both within and beyond the region, to include [malicious cyber activity](#) against the U.S. homeland, including as a response to the unprecedented economic costs imposed on Russia by the U.S. and our allies and partners. Evolving intelligence indicates that the Russian Government is exploring options for potential cyberattacks. Every organization—large and small—must be prepared to respond to disruptive cyber incidents. As the nation's cyber defense agency, CISA stands ready to help organizations prepare for, respond to, and mitigate the impact of cyberattacks. When cyber incidents are reported quickly, we can use this information to render assistance and as warning to prevent other organizations and entities from falling victim to a similar attack.

**Organizations should report anomalous cyber activity and/or cyber incidents 24/7 to [report@cisa.gov](mailto:report@cisa.gov) or (888) 282-0870.**
